

Visit us on our booth B24 – Hall 15
to discover exciting innovations & developments
from the Billion team!

SELECT², new generation of electric IMM: *The perfect versatility*

Select² implements a new clamping unit design with optimized mechanical specifications.
This configuration matches all types of productions.
It suits in particular performance needs for packaging, cosmetics or medical applications.

- > **Fast-cycle applications**
- > **Overmolding or sandwich molding applications**

From 175 to 400 Tons, for every production need!

VERTIS, the first vertical IMM with rotary index table: *The solution for inserts overmolding*

To answer increasing needs of plastics processors for inserts overmolding, Billion has developed its first vertical injection molding machine **VERTIS V270 – 100 Tons**.

VERTIS[✓]

The machine features a « C-Frame » clamping unit design without tie bars providing easy access to the mold area.
The combination of powerful electric motors, with an innovative hydraulic drive, offers precision, speed and low energy consumption.

Precision – Speed - User friendliness - Energy savings

Our offer for Industry 4.0

Are you looking for **reliable production management and unlimited traceability**?
Come and see our **4.0 plastics processing cells** with exclusives features:
The entire library of parameters stored for every single part, is accessible and ready
for consultation via a **unique QR Code**.

Whether real time, daily or global vision, **Industry 4.0 promotes transparency in production**.
